Speedy Tempe,
AZ.

Mutoh America, a leading manufacturer of large format printers installed a new ValueJet 48" Eco Solvent printer and Ultima 1400 contour cutter system into the Tempe, Arizona Sir Speedy location with great success.

Rich Wasser from the Tempe Sir Speedy location said, *"We first saw the Mutoh ValueJet and the accompanying cutter at a convention in St. Louis. We were very impressed with the quality of the product and the various media it was capable of handling.*

We met with Mutoh's representatives who were very helpful in detailing the capabilities of the product. We decided it was time to make the investment in large format and were confident that this equipment was the right way to go."

"Since delivery and installation, we have been overwhelmed by the ease of use, speed, and functionality of the equipment. The Mutoh staff has been with us every step from installation and training to going live.

Previously outsourced jobs are no longer an issue for Sir Speedy in Tempe, AZ. "In the 3 weeks since we have been up and running, we have produced numerous jobs and our customers have been blown away with the quality. This equipment separates us from almost all of our competition and will be a strong profit center for us."

Mutoh's representative for Sir Speedy Brian Phipps anticipates that this will be the first of many eco solvent printers purchased by PIP and Sir Speedy.

This opens up a whole new revenue stream with a limited investment and ease of use. Mutoh's training program will have any store up, running and ready to sell outdoor banners and signs in just a few days after the install. For more information you can reach Brian at 1-800-99MUTOH Ext 214.
